Bank AI project: oral defense

Finished-video companion for all roles. Explain the case, the trade-offs and the limits of your evidence.

Prepared for 5DA06 · Reviewed 1 November 2026

Online reader: https://pqhhust.github.io/ai-ethics-atlas/

Deadline and assessment focus

Video: 4 November 2026, end of day. Presentation and discussion: 6 November 2026.

Prepared around the instructor's announcement: the video summarises the case and its difficulties; the discussion tests holistic understanding. A justified decision not to deploy is a valid outcome.

- Answer the question directly, then give a case-specific reason and a concrete mechanism.
- The lead speaker gives the decision; the supporting speaker adds a different perspective.
- Distinguish a fact from the case, a legal requirement, a proposed policy and a question still to be tested.
- If you do not know, identify the missing point and what evidence would resolve it. Do not improvise a legal rule or a performance number.

The shared recommendation

Platform · Conditional approval

Named owners, registration, access controls, supplier checks, testing and incident procedures.

Internal assistants · Bounded pilot

Approved data and tasks; users verify outputs; no consequential autonomous action.

Customer chatbot · Restricted use

Approved information, AI disclosure, accessible human escalation; no credit decision or unsupported personalised advice.

Fraud assistant · Restricted investigation support

Summarises evidence for investigators; cannot block payments. Existing fraud decisions remain separately governed.

Credit workflow · Postpone LLM production use

Offline extraction and wording tests only; reconsider after validation, faithful explanations and a functioning review process.

LLM scoring, payment blocking, employee emotion recognition · Reject on this platform

A clear project policy. Legal prohibitions and exceptions have their own scope; not every rejection is a universal legal ban.

Explanations and contestability

What the customer receives

- A short plain-language decision notice: outcome, relevant data used and the actual main reasons for that outcome.
- An optional detail layer: data sources, how information contributed to the assessment, limitations and a worked illustration where appropriate.
- A visible review route: a contact, an accessible non-digital option, how to correct data or submit context, and what happens next.

- For the initial credit workflow, use a validated explanation process without an LLM. Any future wording assistant must preserve the actual assessment and pass faithfulness tests.

Drawbacks of explanation formats

- Plain language is accessible, but can oversimplify. Link it to a more detailed explanation and a human contact.
- Feature-importance charts can help specialists, but may be confusing, unstable or mistaken for causal reasons. They do not replace an intelligible account.
- A counterfactual shows how changed inputs could affect this model's result. It is not a promise of a loan, a causal claim or a fair demand that a person change circumstances beyond their control.
- Generated text can improve readability while introducing an unsupported reason or changing emphasis. Use traceability, numerical checks and human evaluation; no single automatic checker proves faithfulness.
- Fraud explanations need enough information for a real challenge while protecting others' data and avoiding disclosure of evasion instructions. The limits require a case-specific legal assessment.

Grounds for contesting a decision

- The bank used incorrect, outdated or another person's information.
- Relevant context was omitted or an inference from the data is inappropriate.
- The stated reason does not match the information or process actually used.
- The applicant disputes the relevance, proportionality or discriminatory effect of a criterion, even if the data are accurate.
- The required procedure was not followed: for example, review was unavailable or consisted of a rubber stamp.

A meaningful review process

- Receive the request without requiring the customer to understand the model; provide accessible channels.
- Give urgent cases a route to immediate human attention, especially when a payment restriction causes hardship.
- A reviewer with authority and adequate time checks the data, reasoning and customer's account; an LLM does not adjudicate the complaint.
- Correct data or reassess the decision where warranted, explain the result, and provide the applicable escalation routes.
- Record recurring complaints and reversals so that the committee can change or suspend the application. A review right does not guarantee a favourable lending decision.

Hypothetical example for the oral

- Hypothetical oral example, not an observed bank result: a rejected applicant says the assessment used an outdated income record.
- The notice identifies the income information used and explains its relevance. The applicant can supply a correction and request human review.
- The reviewer checks the new evidence and the assessment, then gives a reasoned outcome. The group does not promise that correcting one input automatically secures approval.

Preparation by role

Computer Scientist / Project Manager

- Explain the application architecture and why the LLM is not the scoring engine.
- Defend a measurable pilot, the cost of safeguards and the postponement of credit benefits.
- Show the CS-to-PM change: technical preference does not decide the final recommendation.

Practise: D01, D03, D10, D13, D19, D23

Twenty-four jury questions

D01 · What exactly are you asking the board to approve?

Lead: CS / PM. Support: All roles. Give the short answer in 20–30 seconds.

- A shared platform with application-specific approval, not permission for every employee-built use.
- Launch a bounded internal pilot, restrict chat and fraud support, and postpone live LLM credit use.
- Fund validation, support and complaint handling; reject LLM scoring and payment blocking on this platform.

Follow-up: Which decision changes if the pilot has little benefit?

Weak answer to avoid: A vague approval of “AI in banking”.

D02 · Why does a secure platform still need application review?

Lead: Security. Support: Compliance. Give the short answer in 20–30 seconds.

- Security controls access and data flow; it cannot settle whether a purpose is lawful or legitimate.
- The same model can answer general questions or influence a credit decision.
- Require a named owner, a declared purpose, suitable controls and reassessment when that purpose changes.

Follow-up: Can the gateway discover an undeclared purpose?

Weak answer to avoid: Claiming the gateway understands every employee’s intention.

AI Act · 6 · Classification rules for high-risk AI systems
https://publications.europa.eu/resource/cellar/b1730fb2-8f1c-11f1-9262-01aa75ed71a1.0001.03/DOC_1#art_6

AI Act · 25 · Responsibilities along the AI value chain
https://publications.europa.eu/resource/cellar/b1730fb2-8f1c-11f1-9262-01aa75ed71a1.0001.03/DOC_1#art_25

D03 · Why not ban LLMs, or let every team choose its own tool?

Lead: CS / PM. Support: Security. Give the short answer in 20–30 seconds.

- A ban may forgo useful applications and encourage unapproved tools; we have not measured that behaviour in this bank.
- Unrestricted selection makes data flows, responsibilities and supplier dependencies harder to govern.
- A bounded shared platform lets the bank test usefulness while enforcing common controls.

Follow-up: What evidence would make a ban or a smaller pilot preferable?

Weak answer to avoid: Stating that shadow AI has already been observed in the supplied case.

D04 · Why postpone LLM use in credit instead of allowing a human to sign off?

Lead: Compliance. Support: CS / PM. Give the short answer in 20–30 seconds.

- Extraction and wording can influence a consequential decision even if the LLM never produces a score.
- Human review needs time, information and authority to correct the assessment.
- We postpone this use until validation and borrower review processes work; this is our proposed release decision, not a blanket ban on LLMs in finance.

Follow-up: Would a corrected payslip extraction be enough to release the whole workflow?

Weak answer to avoid: Treating a signature as proof of meaningful review.

GDPR · 22 · Automated individual decision-making, including profiling
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_22

Consumer credit · 18 · Obligation to assess the creditworthiness of the consumer
https://publications.europa.eu/resource/cellar/12d92010-76c8-11ee-99ba-01aa75ed71a1.0006.03/DOC_1#art_18

CJEU judgments · C-634/21 • 7 December 2023 · SCHUFA
https://publications.europa.eu/resource/cellar/acd82fb9-94e3-11ee-b164-01aa75ed71a1.0010.05/DOC_1

D05 · What would the explanation actually look like?

Lead: Ethics. Support: CS / PM. Give the short answer in 20–30 seconds.

- A short plain-language notice identifies the outcome, the relevant data used and the actual main reasons.
- A detail layer and a human contact let the person understand the assessment without reading code.
- The same notice explains how to correct information or request review. Initially, credit explanations use the validated non-LLM process.

Follow-up: What does your explanation omit, and can the customer obtain that detail?

Weak answer to avoid: Saying only that the system will be transparent.

CJEU judgments · C-203/22 • 27 February 2025 · Dun Bradstreet
https://publications.europa.eu/resource/cellar/44fa73b1-f4ef-11ef-b7db-01aa75ed71a1.0010.05/DOC_1

Consumer credit · 18 · Obligation to assess the creditworthiness of the consumer
https://publications.europa.eu/resource/cellar/12d92010-76c8-11ee-99ba-01aa75ed71a1.0006.03/DOC_1#art_18

D06 · What are the drawbacks of a letter, a chart and a counterfactual?

Lead: Ethics. Support: CS / PM. Give the short answer in 20–30 seconds.

- A letter can oversimplify; a feature chart may be unintelligible or wrongly read as causal.
- A counterfactual describes a model response to changed inputs, but may suggest an impossible or unfair change.
- Use a layered explanation tailored to the recipient, test understanding and provide a human review route.

Follow-up: Could a customer understand the text and still be unable to contest it?

Weak answer to avoid: Calling any one explanation format sufficient for every person.

D07 · On what grounds can a user contest a decision?

Lead: Compliance. Support: Ethics. Give the short answer in 20–30 seconds.

- They can challenge inaccurate information, missing context, an inappropriate inference or a reason that does not match the actual assessment.
- They may also question a criterion’s relevance or discriminatory effect, or whether the review procedure was followed.
- The appropriate legal route depends on the decision and facts; our process must accept the concern and give a reasoned response.

Follow-up: What if the data are correct but the customer says the criterion is unfair?

Weak answer to avoid: Limiting contestation to correcting a typo.

GDPR · 16 · Right to rectification
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_16

GDPR · 22 · Automated individual decision-making, including profiling
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_22

Consumer credit · 18 · Obligation to assess the creditworthiness of the consumer
https://publications.europa.eu/resource/cellar/12d92010-76c8-11ee-99ba-01aa75ed71a1.0006.03/DOC_1#art_18

D08 · What is the difference between an explanation and contestability?

Lead: Ethics. Support: Compliance. Give the short answer in 20–30 seconds.

- An explanation helps someone understand the decision. Contestability lets them challenge it and obtain a meaningful response.
- That requires an accessible channel, a reviewer with authority, and the possibility of correction or reassessment.
- A fluent letter without those institutional arrangements does not give the customer an effective route to challenge.

Follow-up: Who can reverse the outcome, and what happens if the reviewer disagrees with the model?

Weak answer to avoid: Equating a generated explanation with a remedy.

CJEU judgments · C-203/22 • 27 February 2025 · Dun Bradstreet
https://publications.europa.eu/resource/cellar/44fa73b1-f4ef-11ef-b7db-01aa75ed71a1.0010.05/DOC_1

Consumer credit · 18 · Obligation to assess the creditworthiness of the consumer
https://publications.europa.eu/resource/cellar/12d92010-76c8-11ee-99ba-01aa75ed71a1.0006.03/DOC_1#art_18

D09 · Does human review mean every challenged loan must be approved?

Lead: Compliance. Support: Ethics. Give the short answer in 20–30 seconds.

- No. Review must consider the customer's account and correct or reconsider the assessment where warranted.
- The bank can maintain a refusal if it is justified through a lawful process and explained appropriately.
- Our commitment is to meaningful review and the applicable escalation routes, not a guaranteed favourable decision.

Follow-up: How would you tell the customer that the refusal remains?

Weak answer to avoid: Promising approval after a correction or a counterfactual change.

Consumer credit · 18 · Obligation to assess the creditworthiness of the consumer
https://publications.europa.eu/resource/cellar/12d92010-76c8-11ee-99ba-01aa75ed71a1.0006.03/DOC_1#art_18

GDPR · 22 · Automated individual decision-making, including profiling
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_22

D10 · How would you check that an LLM explanation is faithful?

Lead: CS / PM. Support: Ethics. Give the short answer in 20–30 seconds.

- Keep the actual assessment, relevant inputs and validated explanation separate from generated wording.
- Check that the wording adds no unsupported reasons or altered numbers; test whether readers understand the same decision.
- Automatic checks and human evaluation provide evidence, but neither proves every future output faithful. That is why this use starts offline.

Follow-up: Are the model's reason codes themselves a complete and valid explanation?

Weak answer to avoid: Assuming a reason-code match proves the whole explanation correct.

D11 · Why spend on safeguards for fraud if it is outside the credit high-risk category?

Lead: Ethics. Support: Compliance. Give the short answer in 20–30 seconds.

- The exception is specific to one AI Act category; the customer can still suffer a serious wrongful restriction.
- Assess false alarms, customer burden and the speed of correction as well as detection performance.
- We propose proportionate safeguards because the harm matters, while checking the other laws that apply.

Follow-up: How would you justify the cost of an urgent correction channel?

Weak answer to avoid: Saying fraud detection is entirely unregulated.

AI Act · Annex III · High-risk AI systems referred to in Article 6(2)
https://ai-act-service-desk.ec.europa.eu/en/ai-act/annex-3

GDPR · 22 · Automated individual decision-making, including profiling
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_22

D12 · If the LLM cannot block payments, who does?

Lead: Security. Support: CS / PM. Give the short answer in 20–30 seconds.

- Existing fraud controls remain separate from the LLM investigation assistant.
- Those controls still need their own validation, oversight and customer safeguards.
- A gateway outage must not itself stop payments or silently redirect decisions to an LLM.

Follow-up: How would you test that separation and the fallback process?

Weak answer to avoid: Implying that removing an LLM solves every risk in fraud decisions.

D13 · Why can high accuracy be misleading for fraud?

Lead: CS / PM. Support: Ethics. Give the short answer in 20–30 seconds.

- When fraud is rare, predicting “not fraud” for almost everyone can look accurate.
- Assess precision, recall, false alarms and the consequences of errors at realistic prevalence.
- We have no bank performance figures. Evaluate on suitable held-out data and monitor change over time.

Follow-up: What changes if fraud prevalence increases?

Weak answer to avoid: Using a published benchmark’s performance as a result for this bank.

D14 · Can you prevent prompt injection completely?

Lead: Security. Support: CS / PM. Give the short answer in 20–30 seconds.

- We cannot promise that. Treat retrieved content as untrusted and limit what the model can access or do.
- Enforce permissions outside the model, separate sensitive data domains and avoid unnecessary write-capable tools.
- Test attacks, monitor failures and make suspension and recovery practical.

Follow-up: Does asking a human to confirm a malicious action always protect the bank?

Weak answer to avoid: Claiming a filter or confirmation button eliminates the threat.

AI Act · 15 · Accuracy, robustness and cybersecurity
https://publications.europa.eu/resource/cellar/b1730fb2-8f1c-11f1-9262-01aa75ed71a1.0001.03/DOC_1#art_15

GDPR · 32 · Security of processing
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_32

D15 · Are internal hosting and no personal data in external APIs required by law?

Lead: Compliance. Support: Security. Give the short answer in 20–30 seconds.

- They are our proposed architecture and risk limits, not a general legal prohibition on external APIs.
- External processing needs the applicable data-protection, supplier, security and transfer assessments.
- We start with a narrow exception for approved tasks without personal data and assess confidentiality as well.

Follow-up: Could confidential business information still be risky without personal data?

Weak answer to avoid: Saying “no personal data” means no remaining obligation.

GDPR · 28 · Processor
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_28

GDPR · 44 · General principle for transfers
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_44

DORA · 28 · General principles
https://publications.europa.eu/resource/cellar/0caf473a-85bd-11ed-9887-01aa75ed71a1.0006.03/DOC_1#art_28

DORA · 30 · Key contractual provisions
https://publications.europa.eu/resource/cellar/0caf473a-85bd-11ed-9887-01aa75ed71a1.0006.03/DOC_1#art_30

D16 · How would you measure unequal harms without misusing sensitive data?

Lead: Ethics. Support: Compliance. Give the short answer in 20–30 seconds.

- First specify the harm and why group-level analysis is needed; then assess a lawful route and safeguards.
- Restrict access, purpose and retention, and consider uncertainty in small groups.
- A proxy can be misleading and may itself reveal sensitive information. Neither proxies nor an aggregate fairness score automatically solve the problem.

Follow-up: How would you respond to a disparity based on very few cases?

Weak answer to avoid: Treating bias auditing as unrestricted permission to collect sensitive data.

GDPR · 9 · Processing of special categories of personal data
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_9

AI Act · 4a · Processing of special categories of personal data for bias detection and correction
https://publications.europa.eu/resource/cellar/b1730fb2-8f1c-11f1-9262-01aa75ed71a1.0001.03/DOC_1#art_4a

D17 · What if an employee labels a credit application as a harmless assistant?

Lead: Security. Support: Compliance. Give the short answer in 20–30 seconds.

- Registration is a control, not a guarantee of honesty or understanding.
- Constrain access and tools, check samples of actual use, and require review when purpose or data access changes.
- Suspend a misclassified use and investigate the failure; do not claim that prompt inspection reliably detects every misuse.

Follow-up: How do you avoid turning monitoring into excessive employee surveillance?

Weak answer to avoid: Promising that the gateway detects all undeclared uses.

GDPR · 5 · Principles relating to processing of personal data
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_5

AI Act · 25 · Responsibilities along the AI value chain
https://publications.europa.eu/resource/cellar/b1730fb2-8f1c-11f1-9262-01aa75ed71a1.0001.03/DOC_1#art_25

D18 · What happens during a provider outage or a serious data incident?

Lead: Security. Support: CS / PM. Give the short answer in 20–30 seconds.

- Use the tested application-specific fallback or suspend the assistant, with a clear user message.
- Keep the existing credit and payment decision processes independent from the LLM service.
- Follow the incident process, preserve appropriate evidence, assess notifications and validate recovery before restarting.

Follow-up: Which component is a single point of failure in your design?

Weak answer to avoid: Claiming a kill switch alone ensures resilience.

DORA · 6 · ICT risk management framework
https://publications.europa.eu/resource/cellar/0caf473a-85bd-11ed-9887-01aa75ed71a1.0006.03/DOC_1#art_6

DORA · 17 · ICT-related incident management process
https://publications.europa.eu/resource/cellar/0caf473a-85bd-11ed-9887-01aa75ed71a1.0006.03/DOC_1#art_17

DORA · 19 · Reporting of major ICT-related incidents and voluntary notification of significant cyber threats
https://publications.europa.eu/resource/cellar/0caf473a-85bd-11ed-9887-01aa75ed71a1.0006.03/DOC_1#art_19

GDPR · 33 · Notification of a personal data breach to the supervisory authority
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_33

D19 · What does this cost, and what benefit would justify it?

Lead: CS / PM. Support: All roles. Give the short answer in 20–30 seconds.

- We have no case-specific budget or measured return, so we would not invent one.
- Cost the infrastructure, platform team, validation, training, supplier work and complaint handling.
- Measure task usefulness and error burden against a baseline; reduce or stop a use whose benefit does not justify its cost and harm.

Follow-up: What would you measure in the first pilot?

Weak answer to avoid: Treating another bank's architecture as proof of productivity here.

D20 · Your committee is internal. Why should affected people trust it?

Lead: Ethics. Support: CS / PM. Give the short answer in 20–30 seconds.

- That is a real limit in our proposal, and the customer-representative question remains unresolved.
- Complaint channels, worker consultation and independent challenge create some routes for affected people to be heard.
- They do not fully replace representation in design. Review the committee's composition using pilot experience and record the dissent.

Follow-up: What would persuade the PM to add an external representative?

Weak answer to avoid: Pretending an ombudsman or a complaint form removes the power imbalance.

D21 · Why involve the works council before launch?

Lead: Compliance. Support: Ethics. Give the short answer in 20–30 seconds.

- In the relevant workplace context, French law provides information and consultation duties concerning new technologies and work organisation.
- The proposal changes how staff work, verify outputs and bear responsibility, so this belongs in planning before rollout.
- Confirm the applicable process and include workers' concerns about workload, deskilling and discretion.

Follow-up: Does consultation mean workers must approve every individual application?

Weak answer to avoid: Presenting consultation as a universal veto or as optional publicity.

French labour law · L2312-8 · CSE: consultation / workplace technology
https://code.travail.gouv.fr/code-du-travail/l2312-8

French labour law · L2312-14 · CSE: consultation / workplace technology
https://code.travail.gouv.fr/code-du-travail/l2312-14

D22 · Which legal requirements matter before the delayed high-risk duties?

Lead: Compliance. Support: CS / PM. Give the short answer in 20–30 seconds.

- GDPR already applies to personal-data processing and qualifying automated decisions.
- AI interaction transparency and the consumer-credit rules have their own application dates.
- Check the provision and the use rather than treating one later AI Act date as permission to ignore existing duties.

Follow-up: What is the consumer-credit application date, and is every business loan covered?

Weak answer to avoid: Saying all AI Act or banking duties start on one date.

GDPR · 22 · Automated individual decision-making, including profiling
https://publications.europa.eu/resource/cellar/3e485e15-11bd-11e6-ba9a-01aa75ed71a1.0006.03/DOC_1#art_22

D23 · What would make you change your recommendation?

Lead: CS / PM. Support: All roles. Give the short answer in 20–30 seconds.

- An unacceptable incident, persistent error burden or unusable review process can stop an application.
- A pilot that brings little benefit or is routinely bypassed can undermine the platform's business case.
- Stronger validation or a better alternative can also justify expansion or redesign; reopening the decision is part of governance.

Follow-up: Who decides to restart a suspended application?

Weak answer to avoid: Defending the original recommendation regardless of new evidence.

D24 · The jury asks for a legal deadline or technical result you do not know. What do you say?

Lead: Security. Support: All roles. Give the short answer in 20–30 seconds.

- I have not verified that specific point, so I would not give a number from memory.
- I can explain the relevant risk and identify the provision, test or specialist needed to resolve it.
- Our release decision would remain conditional on that check if it could change the outcome.

Follow-up: Can you still make a useful recommendation while acknowledging that limit?

Weak answer to avoid: Inventing a result or giving a confident but unsupported rule.

When you do not know

- I have not established that point. What I can support is …
- The missing fact is … I would check … before deciding.
- If that fact changes, the consequence for our recommendation would be …

Facts, policies and evidence still needed

Case facts

The bank proposes a shared LLM platform for employees; possible applications include chatbots, credit assessment and fraud detection.

Proposed architecture

Internal hosting by default, limited external use, purpose registration and permission-aware retrieval. These are the group’s choices.

Proposed controls

No LLM scoring or payment blocking; suspension power; complaint channels; pilot reviews. Do not present these as universal statutory rules.

Unknown at this stage

Actual costs, productivity gains, adoption, error rates, fairness outcomes and the internal-versus-external model quality gap.

Removed from the spoken script

Unverified claims that staff already upload client data; the 97%/5% benchmark; relative wording such as “four weeks away”; unspecified court suspensions.

Evidence to collect

Task baselines, realistic error analysis, usability and review-process tests, security tests, supplier evidence and operational cost estimates.

Final rehearsal checklist

- Each performer explains the group decision and one concession without reading.
- Run the script once with the timer. Keep the CS/PM switch and Ethics dissent; shorten repetition if the run exceeds 6:40.
- Each performer answers three assigned questions in 20–30 seconds, then one follow-up.
- Practise the explanation example jointly: CS describes the output, Ethics the challenge, Compliance the right and PM the staffing.
- Practise an unknown question. Acknowledge the limit, explain the missing evidence and preserve the conditional recommendation.
- Check that all speakers give the same answer on live credit, external personal data, payment blocking and suspension authority.
- Verify the uploaded video plays, is no longer than seven minutes and is submitted by 4 November, end of day.
